EDUCATION

University of Sydney

Feb 2019 – Dec 2022

B. Advanced Computing — Computer Science & Business Analytics, Distinction (3.8 GPA equivalent)

Sydney, Australia

- **Winner, NSW State Final** — Australian Business Students Entrepreneurship Competition
- **Runner-up, National Final** — Australian Business Students Entrepreneurship Competition
- **Finalist**, Deloitte x SMS Case Study Competition
- **IT Director**, 180 Degrees Consulting

TECHNICAL SKILLS

Languages: TypeScript / JavaScript, C#, Python, SQL, HTML, CSS, Shell

Frontend: React, React Native / Expo, Ember.js, Tailwind CSS, Storybook, Playwright, Cypress

Backend: .NET 8 / ASP.NET, Node.js, NHibernate, CQRS / DDD / Repository pattern, MassTransit, REST

Cloud & Data: Azure, Azure Data Factory, PostgreSQL, SQL Server, Docker, Terraform, Jenkins, Datadog, Git

AI: Azure OpenAI (GPT-4o), Azure Document Intelligence, Claude Code, Cursor

Certifications: Microsoft Azure Administrator Associate (AZ-104) · Azure AI Fundamentals (AI-900) · Azure Data Fundamentals (DP-900) · HashiCorp Terraform Associate (003) · Claude Code 101, Anthropic

WORK EXPERIENCE

Karbon

May 2024 – Present

Full Stack Engineer (Mid Level) | Accounting Practice Management Software

Sydney, Australia

- Served as **primary engineer on Karbon for Clients (K4C)** across .NET backend, BFF middleware, React/TypeScript web, and React Native mobile, growing the platform from **22 to 1,652 activated accounting firms**.
- Led a **multi-repo integration of Stanford Tax** into K4C with magic-link auth, task display, deep-link redirects, and invitation logic across all four repos, resulting in the onboarding of **212 US tax firms** and contributing **\$1.6M ARR**.
- Built and shipped the **K4C mobile app** (React Native / Expo) to both the **App Store and Google Play**, owning the release pipeline end to end and reaching **2,500+ downloads**.
- Led K4C integration of an **AI document validation service** validating client-uploaded receipts against firm clarification requests during Period Close, orchestrating **Azure Document Intelligence** and **GPT-4o** behind an async **CQRS/MassTransit** pipeline.
- Led migration of **EmailManager** — a core pillar processing **~150 million messages monthly** — to **.NET 8**, refactoring legacy code and migrating **300+ unit tests** with **zero major regressions** post-deployment.
- Owned the **end-to-end billing experience** (invoice lists, payment gates) and architected **non-admin permission gating** with a feature-flagged rollout.
- Designed a **FIFO work queue system** for tax item processing (schema, API layer, and Kanban filters) reaching **23 beta firm adoptions against a target of 10**.
- Rotate **on-call across all severity levels**, owning triage, root-cause analysis, resolution, and customer communication; led the resolution of **3 live issues and hotfixes**.
- Initiated the migration from **Cypress to Playwright** and built **Datadog observability dashboards**, giving the team faster, less flaky end-to-end coverage and earlier visibility into production issues.

Lab3

Feb 2023 – May 2024

Software & Data Engineer (Junior Level) | Managed cloud, software and cybersecurity services

Sydney, Australia

- Built **ingest and inventory features** for **Dr Migrate**, Lab3's Azure cloud-migration assessment product sold on the Microsoft Marketplace, surfacing discovered server, application, and dependency data from client **VMware estates**.
- Developed the customer-facing web app for **SensorMine**, Lab3's IoT platform, presenting **live sensor telemetry** to mining and utilities clients in React over a .NET/MVC backend.
- Built automated **ETL pipelines** with **Azure Data Factory** and SQL to load CSV data into reporting models, converting a manual reporting workflow into a scheduled run.

Adobe

Apr 2022 – Oct 2022

Solutions Consultant Intern (UI/UX)

Sydney, Australia

- Designed and presented an **Adobe Experience Platform** solution for **Tourism Australia** to **250+ stakeholders** including Adobe senior leadership.
- Led the **i18n translation** of the site into Dutch, Spanish, and French, implementing locale matching across each.

PROJECTS

RCP Quote Tool | Next.js, React, TypeScript, Supabase / Postgres, Python, Tailwind

- Built an internal quoting tool for **LED Direct Solutions**: an operator uploads a **Reflected Ceiling Plan PDF**, a **Python** pipeline extracts fixture text and measures vector strip runs, each line matches against a **41-product catalogue** with confidence scoring, and the result exports as a branded quote PDF.
- Designed a **data flywheel**: every operator correction is logged against the original AI prediction and pipeline version, accumulating labelled training data for a future detection model. **SSE** progress streaming, annotated plan overlay, **RLS** on every table.

Concourse | TypeScript, React, Node, Postgres / DBOS, Electron, Astro, pnpm monorepo

- Building a **control plane for autonomous coding workflows**: a run carries an agent-ready ticket to a merged PR through a gated, inspectable, resumable lifecycle (Shape · Plan · Execute · Verify · Ship · Learn).
- Durable **8-node pipeline** on a Postgres-backed kernel with a real-LLM worker, a Vite/React product UI, and an Electron build with embedded Postgres; invariant, durability, and browser gates in CI.
